

WATERMAIN FLUSHING

PEMBERTON NORTH WATER SYSTEM

Thursday, October 19 until Friday, October 20, 2023
Pemberton North water system users may notice
some discolouration of water as a result of
watermain flushing.

Residents are advised to run their water until it is clear before using.

Flushing involves isolating a section of the water distribution system and opening the hydrants to release water at a high flow rate. The increased water flow aids in the removal of material that has built up over time.
