

Hydrant Flushing

Pemberton North Water System

Pemberton North water system hydrant flushing and maintenance will occur on **Thursday, October 9 and Friday, October 10, 2025 8:30 am - 5:30 pm.**

Disruption to water service are minimal.

Flushing can improve water quality by reducing the sediment that comes from the inside of the pipes, and flushing will decrease the rate of bacterial growth. It can also improve taste, odour & colour. Our aim is to run the water until it is completely clear, but you may experience some of the following in a very limited capacity:

- Water pressure may be temporarily reduced.
- Temporary discolouration of water. If so, run water for 5 - 10 minutes until water clears
- Refrain from using a washing machine during this time.
